

**Dbl. 10 All-Stainless HERITAGE ProTime I HerringBone
Installed at Martin Vanderstappen, Dutch-Made Holsteins
Lake Geneva, WI**

Martin used to milk about 250 cows thru the old stanchion barn together with the family, Nancy especially. Hard work, long hours. There comes a time when enough is enough. In January of 2008 they pulled the trigger - time to build a parlor! Milking started in September.

New Parlor Complex added at the center of the existing free stall barn

Dbl. 10 all-stainless HERITAGE ProTime I with Model SB Arm TakeOffs, Rapid Exit, Automatic Indexing and a Crowd Gate. Parlor planned for expansion to dbl. 16 later on.

Parlor was pre-assembled in the factory and arrived at the dairy on two flatbed trucks

A good Crowd Gate keeps the cows minds on business - face forward, chew and wait your turn

**The Holy Grail of Milking Routines -
One-Man Operated Parlors**

Goal - have the cows come into the parlor by themselves. Easy with just one man: he's plenty busy in the pit with no time to chase cows. Wonder over wonder and given a bit of time, the cows catch on: "Want to get milked in this place, better get on in there!"

One man by himself concentrates on the essentials: pre-dip, wipe, attach, post dip, let the cows out. With Arm TakeOffs there's no squawking, no fall-offs, no chasing teat cups and with the cows coming in by themselves, milking in a dbl. 10 is an easy job. Peace and quiet. Just ask Martin.

Besides, only half the payroll is nothing to sneeze at either.

All-stainless HERITAGE Parlors

People Comfort - Cow Comfort - Great Quality of Milking!
